

## Request

I would like to request the location (preferably given as OSEasting, OSNorthing, if not the most precise location data you hold) of every road gully and catch pit under council responsibility. I would like this information in tabular format (csv or excel)

If available, I would also like the silt level and if each gully was defective on last inspection.

---

Clarification to request:

*If there is an option on the database which says whether a gully was defect free (yes/no) then I would like that included.*

*I am happy to narrow my request to only the location data if defect data is not readily available in a suitable format.*

## Response

Please see attached Excel document including the requested data
